PENDING CLAIMS AS AMENDED

Please amend the claims as follows:

1. (Currently Amended) A method for receiving messages forwarded from a second

radio network to a first radio network, the method comprising:

establishing a session with the first radio network;

sending to the first radio network an indication of an interest in receiving unsolicited

messages from the second radio network; and

receiving an encapsulated message from the first radio network, wherein the encapsulated

message includes an unsolicited message from the second radio network that has been forwarded

to the first radio network and wherein the first radio network continues to send the encapsulated

message until the first radio network receives a message to stop encapsulation.

2. (Original) The method of claim 1, further comprising:

sending to the first radio network an indication of an interest to be paged for a particular

set of service options.

3. (Original) The method of claim 1, further comprising:

registering with the second radio network prior to the receiving.

4. (Original) The method of claim 1, further comprising:

2

Attorney Docket No.: 000322

Customer No.: 23696

sending a first message to the first radio network to request the encapsulating and

forwarding of the unsolicited messages from the second radio network.

5. (Original) The method of claim 4, wherein the first message is sent periodically

within a first time interval.

6. (Original) The method of claim 5, wherein the encapsulating and forwarding of

the unsolicited messages from the second radio network cease if the first message is not received

within a second time interval, wherein the second time interval is longer than the first time

interval.

7. (Original) The method of claim 1, further comprising:

sending a second message to the first radio network to request termination of the

encapsulating and forwarding of the unsolicited messages from the second radio network.

8. (Original) The method of claim 1, further comprising:

sending a page response message to the second radio network in response to receiving the

encapsulated message from the first radio network.

9. (Original) The method of claim 1, further comprising:

establishing a connection with the second radio network in response to receiving the

encapsulated message.

Attorney Docket No.: 000322

Customer No.: 23696

10. (Original) The method of claim 1, wherein the encapsulated message includes

an Access Terminal Identifier (ATI) Record field indicative of an address of a recipient access terminal,

a Message ID field that indicates that the message is an encapsulated message, and

a message field indicative of one or more paging records for the recipient access terminal.

11. (Original) The method of claim 1, wherein the unsolicited messages are sent from

a mobile station controller to the first and second radio networks.

12. (Original) The method of claim 1, wherein the unsolicited messages are sent from

the second radio network to the first radio network.

13. (Original) The method of claim 1, wherein the encapsulated message is received

from the first radio network on a forward traffic channel.

14. (Original) The method of claim 1, wherein the encapsulated message is received

from the first radio network on a designated control channel cycle.

15. (Original) The method of claim 1, wherein the encapsulated message received

from the first radio network is a paging request message.

Attorney Docket No.: 000322

Customer No.: 23696

16. (Original) The method of claim 1, wherein the encapsulated message received

from the first radio network is a voice page.

17. (Original) The method of claim 1, wherein the first radio network is a High Data

Rate (HDR) radio network.

18. (Original) The method of claim 1, wherein the second radio network is a CDMA

radio network that conforms to IS-2000 standard.

19. (Original) An access terminal in a spread spectrum communications system

configured to implement the method of claim 1.

20. (Currently Amended) A method for receiving messages forwarded from a CDMA

radio network to a high data rate (HDR) radio network, the method comprising:

establishing a session with the HDR radio network;

sending to the HDR radio network an indication of an interest in receiving unsolicited

messages from the CDMA radio network;

registering with the CDMA radio network;

periodically sending a first message to the HDR radio network to request the

encapsulating and forwarding of the unsolicited messages from the CDMA radio network; and

Attorney Docket No.: 000322

Customer No.: 23696

receiving an encapsulated message from the HDR radio network, wherein the

encapsulated message includes an unsolicited message from the CDMA radio network that has

been forwarded to the HDR radio network and wherein the HDR radio network continues to send

the encapsulated message until the HDR radio network receives a message to stop encapsulation.

21. (Currently Amended) An access terminal in a spread spectrum communications

system comprising:

a transmitter unit operative to receive and code data and messages, modulate the coded

data, and convert the modulated data into a modulated signal suitable for transmission over a

transmission medium;

a receiver unit operative to receive a transmitted signal, demodulate the received signal to

provide demodulated data, and decode the demodulated data to recover transmitted data and

messages; and

a controller coupled to the transmitter and receiver units and operative to direct

establishment of a session with a first radio network,

transmission to the first radio network an indication of an interest in receiving

unsolicited messages from a second radio network, and

reception and processing of an encapsulated message from the first radio network,

wherein the encapsulated message includes an unsolicited message from the second radio

network that has been forwarded to the first radio network and wherein the first radio

network continues to send the encapsulated message until the first radio network receives

a message to stop encapsulation.

Attorney Docket No.: 000322

Customer No.: 23696

22. (Currently Amended) A method for forwarding messages to an access terminal,

the method comprising:

establishing a session with the access terminal;

receiving an indication from the access terminal of an interest in receiving unsolicited

messages from a radio network;

receiving an unsolicited message from the radio network;

encapsulating the unsolicited message; and

sending the encapsulated message to the access terminal until receipt of a message to stop

encapsulation.

23. (Original) The method of claim 22, further comprising:

receiving a first message from the access terminal requesting the encapsulating and

forwarding of unsolicited messages from the second radio network.

24. (Original) The method of claim 23, wherein the first message is received

periodically from the access terminal, and wherein the encapsulating and forwarding of the

unsolicited messages from the second radio network cease if the first message is not received

within a particular time interval.

25. (Previously Presented) The method of claim 22, further comprising:

receiving a second message from the access terminal to request termination of the

encapsulating and forwarding of unsolicited messages from the radio network.

Attorney Docket No.: 000322

Customer No.: 23696

26. (Currently Amended) An access point in a spread spectrum communications

system comprising:

a transmitter unit operative to receive and code data and messages, modulate the coded

data, and convert the modulated data into a modulated signal suitable for transmission over a

transmission medium;

a receiver unit operative to receive a transmitted signal, demodulated the received signal

to generate demodulated data, and decode the demodulated data to recover transmitted data and

messages; and

a controller coupled to the transmitter and receiver units and configured to direct

establishment of a session with an access terminal,

reception of an indication from the access terminal of an interest in receiving

unsolicited messages from a radio network,

reception of an unsolicited message from the radio network,

encapsulation of the unsolicited message, and

transmission of the encapsulated message to the access terminal until receipt of a

message to stop encapsulation.
